Collective Living Facilities for the Elderly in Eyüp.

This project aims to explore a collective life scenario for 60+ age group to live, socialize and involve in various activities in order to maintain their life qualities and enjoy life both individually and collectively. The architectural inquiry is to design an environment where elders can age with joy and dignity, while receiving the appropriate level of support and pursue their daily routines without refraining themselves from the city life. The program will include a range of housing opportunities conjoined with skilled care services, social, cultural, health and fitness facilities. Project site is strategically located next to Eyüp public hospital, recreational areas stretching along Haliç and the city transportation lines.
